**DETAILED ACTION**

***Response to Arguments***

1. Applicant's arguments filed on May 10, 2005 have been considered but are moot in view of the new ground(s) of rejection.

2. **Status of Claims**

Claims 1 and 4 are amended.

Claim 3 is canceled.

Claims 1, 2, 4 and 5 are pending.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-2, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Pommer, II [US 4,406,927].

Regarding claim 1, Pommer, II teaches a telephone terminal equipment interface circuit shown in Fig. 3, comprising:

a diode bridge (10) for rectifying line current supplied from a subscriber line (L1-L2) and supplying the current to a call transmission/reception circuit [Fig. 3]; and

a forward biasing circuit comprising RI and C of AC supply voltage circuitry for supplying forward biased voltage to the diode bridge, wherein the forward biasing circuit (RI, C) is connected in series with the diode bridge (10) [Figs. 3, col. 4, lines 5-29].

Regarding claim 2, Pommer, II further teaches the interface circuit, wherein the forward biasing circuit causes the diode bridge to operate in an activated state by supplying the forward biased voltage to the diode bridge [Fig. 3].

Regarding claim 4, Pommer, II further teaches the interface circuit, wherein current-voltage characteristics of the telephone interface are such that both the current and the voltage increase in proportion from a starting point (i.e. linear operation) [ See Fig. 2].

Regarding claim 5, Pommer, II further teaches the interface circuit, wherein the forwarding biasing circuit includes a diode element (D1/D2) disposed between X1 and X2, biased in a forward direction [Figs. 3, 6; col. 6, lines 4-33; claims 1-7].

### ***Conclusion***

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
